Experience

September 2019 - December 2019

Wyncode Academy, Miami– Full Stack Web Developer

- Trained in programming languages (JavaScript, Ruby, HTML/CSS), web frameworks and libraries (Rails, React, React on Rails, Gatsby, NextJS), database management and version control (SQLite, PostgreSQL, MongoDB, Git), along with project management using Github and Agile Methodologies, graphql, Apollo, Jest
- API's like Google Maps Places, Google Geolocation, Miami Dade Open Source, and Swapi

Projects

Miami Contaminated Sites - *http://www.miamicontaminatedsites.com/*

This site was developed in React using the Miami Dade API to keep users informed about contamination in their area.

- Fetched data from the Miami Dade Open Source API. Google geolocation API grabs inputed address, converts lat and lon to use as params in our API fetch. Google Maps API used to display locations on map.
- Front end created in React with a node and express server handling the API requests.

Wyn-Search - *In Development:* *https://github.com/naaltunian/wyn-search*

Wyncode Alumni search site built with React, express, Apollo and Apollo server with JWT auth.

- Ability to filter alumni by skillset, search by name in a dynamic React frontend. Display a list of users, passing the user ID to react-roter-dom to query specific user data with apollo on their profile page.
- Experience writing mutation and query resolvers and handling user authentication through a json web token.
- Front end graphql query and mutations through Apollo. Display user information from queries.

Work History

January 2017 - September 2019

Wyncode Academy– Teacher Assistant

- Help students to troubleshoot programming issues in their code
- Provide support while students are learning HTML, CSS, ReactJS, JavaScript, Ruby, Rails, Git/Github.
